

This chart is embedded in this PDF at full resolution. Use your PDF tools to firstly “Select” the whole image, then “Copy Image”.

Open out your Paint or other image viewing program and paste it in. Now you can save it as a PNG or BMP image.

Now you can use the Seaclear MapCal feature to calibrate it, using the lat/longs in the two extreme corners.

Just follow the instructions that come with the Seaclear Chart Plotter, to load it into the plotter... You can then see it in action on your screen, geo-referenced and ready to use for GPS input, AIS input and planning purposes.

DO NOT USE THIS CHART FOR REAL NAVIGATION...it is included only for you to have a practice with.
